

COLOR STAIN™

S-9500 Series Color Stain

Super-Krete® S-9500 Color Stain achieves a decorative acid stain look without the hazard or special handling. Color Stain is a water-based, penetrating, non-acidic, acrylic/urethane emulsion that creates a natural look on new and existing surfaces.

Contains <100 g/l VOC. Super Compliant!

Custom colors are available on request at an additional cost. Colors shown are representative of two coats of Color Stain, applied over Bond-Kote® White and Bond-Kote® Gray and sealed with an acrylic sealer. A sample test is always recommended. Please request a sample and apply on site before beginning any project. Refer to Technical Data Sheet and Super-Krete Specification No. S-9500. For optimum performance, surfaces stained with Color Stain should be sealed. Refer to the **Super-Krete Products Sealer Selection Guide** to determine the appropriate sealer for your project.

Training is available.

For professional use only.
