

## ZED 451 - Chicago, IL

**BEFORE**

**AFTER**

**INSTALLED**

**Pillar Lighting -  
AgiLight Pro160**

**Channel Letter Lighting -  
AgiLight Pro115L1**

### **The Situation:**

A restaurant in the Chicago, IL area expressed concern about the light levels of their main entrance light pillar. Omega Sign/YESCO Chicago provided service and maintenance, but ultimately this would not provide high-quality or consistent lighting and did not meet the customer's needs.

### **The Solution:**

Proper lighting would be achieved through replacing the entire existing 1st generation LED modules. Omega Sign/YESCO Chicago replaced the LEDs with new AgiLight Modules, a modern LED lighting solution that would produce even and bright lighting for their Pillar as well as the newly installed Channel Letters. The Pillar lighting required an LED module that would properly illuminate the width of the pillar without creating any shadows during illumination, whereas the Channel Letters made use of a standard LED system. With the installed lighting solutions, both the Pillar and Channel Letters are now maintenance free.
