To whom it may concern:

As the Resident Engineer on The Buffalo Niagara Medical Campus Gateway Project Phase 1, I am pleased to write this letter of recommendation for John Stock. John and I worked closely together for the year and a half length of the project.

John came to the project with an obvious career's worth of construction knowledge. John showed a remarkable ability to assess what the project sought and immediately lay out plans to accomplish it in an efficient, economic and professional manner. His knowledge of coordinating operations to fit critical path needs was always successful on our project. John manages his people, equipment and material masterfully. It was evident John studied the plans and specifications prior to the project which gave him an ability to speak on any aspect of it if asked. When asked or confronted with any part of the project John was always prepared. Never confrontational John speaks clearly and confidently. If John does not have an answer to a question he is quick to research and get that answer.

John brings to the job not only expertise but care and pride. He speaks with everyone he works with; with good humor and respect that keeps morale high.

If you would like additional information about John please call me at 716-799-4970.
