## Laundry Sorting with Blacklight

Fluorescent invisible ink, which fluoresces under black light, but cannot be seen in laundry marks by commercial laundries. This permits the marks to be used across the fronts of garments where they are easily seen under blacklight.

For sorting garments in the laundry bins, a practical arrangement is to use BLAK-RAY® blacklight fluorescent lamps, positioned over the aisles, between the bins. The fixtures must be positioned and spaced so as to have optimum BLAK-RAY radiation reach all bin openings.

BLAK-RAY XX-series bench lamps are ideal for illuminating over the aisles, bins and work areas of laundries. For information on marking inks, pens, pencils and other BLAK-RAY lamps, refer to UVP's UV Catalog.
